Subject: Loss of Water Pressure - Camelot Drive, Budd Lake
Importance: High

Dear Council Members,

Please be advised that once again we are experiencing a significant loss of water pressure at the upper end of Camelot Drive. We attempted to report this problem Sunday afternoon to the MO Water & Sewer Dept. (973.584.7086) and as always received an answering machine. We left a message notifying them of a significant loss of water pressure over the weekend. We also called the MO Police Dept. (973.691.0850) as per the answering machine message at the Water & Sewer Dept. and asked if there was any way to get in touch with someone over the weekend to report this problem. We were advised that the Police Dept. had a contact number and they would notify them of the problem. To-date we have not received any response to our telephone messages and the water pressure continues to drop. We began to experience a slight decrease in water pressure shortly after the Town Council meeting and it has grown significantly worse since then. We are once again back to bringing water pitchers into the shower/bath to attempt to rinse off in our shower. This is unacceptable. As we stated at the Town Council meeting, this has been an ongoing problem over the past 20 years. Are they once again back to lowering the level of the water tower or have they blown a line down below once again? The obvious lack of concern by the Water Dept. to this issue is aggravating to say the least. It would appear that we are just expected to live with these unacceptable conditions. Your prompt attention to this matter would be greatly appreciated.

Thank you!

Henry Guglielmi, III
